

Spiral Fills Element

Create true spirals in seconds and edit the density. Place the centre of the spiral either inside or outside the shape. Choose in/out or out/in stitch direction.

WiFi Machine Networking

EmbroideryConnect

Now you can wirelessly manage and transfer embroidery designs from EmbroideryHub to the new 2nd generation EmbroideryConnect WiFi device connected directly to your embroidery machines.

- Color-coded LED light notifications.
- Barcode scanner-ready for super-fast design loading.
- Simple set-up to your existing WiFi network.

EmbroideryHub

Quickly and easily SEND, SCAN, and QUEUE your embroidery designs for production. **EmbroideryHub software is included FREE of CHARGE** with all levels listed below.

*Note: EmbroideryConnect software **Element** now **upgraded** to EmbroideryHub. Requires 2nd Generation EmbroideryConnect WiFi device.*

Contact your local IIGM office for special offers on the latest EmbroideryStudio software.

INCLUDED IN THE SOFTWARE

Buttonholes

EmbroideryStudio now allows you to insert preset buttonholes with the new **Add Buttonhole** tool. You can specify their size and merge them into a design.

Buttonholes are usually formed with satin column stitches bordering a slit that is slightly longer than the button diameter, depending on button thickness.

The satin stitch border protects the slit from fraying.

Multi Blend

The new Multi Blend effect in EmbroideryStudio builds on and greatly extends the capabilities of the former Color Blending tool.

It delivers smooth, natural color transitions and sophisticated shading - all within a single, editable object.

With Multi Blend, you can create multiple layers of stitching using any combination of stitch types, fill styles, and special effects.

Add as many layers as needed to achieve the perfect tonal depth or gradient.

INDIA

Redwork

Redwork is a popular hand-embroidery style that uses simple outline stitches typically in red, but also black, blue, or green.

The new **Redwork** tool in EmbroideryStudio allows you to create this style digitally. With one click, objects are sequenced and grouped to replicate the charm of stitching.

Pull Compensation

Pull compensation makes stitches extend slightly beyond the outline of objects. This 'overstitching' helps keep shapes neat and filled, even on stretchy fabrics.

Offset Advanced

Embolden logos, badges and other designs with distinctive, colorful borders. Create automatic outlines and offset borders which can be any combination of 10 object types. Each offset has its own independent object type, color, size and more.

Reef Photo Stitch

Experience the magic of Reef Photo Stitch. Automatically produce a single-colour design. Use CorelDRAW to separate colours and create a multi-colour embroidery.

Contour Stitch

Enhancements have been added to allow "Constant Density" in shapes with variable width, e.g. a bowtie. Corner calculations have been improved.

OPTIONAL ELEMENTS

Graphics Style Digitizing Tools

New graphic design style digitizing tools have been added, making digitizing simpler for non-traditional embroidery digitizers and designers.

Custom Splits - Radial Fill

Apply the radial stitch direction to existing stitch types or stitch effects. Edit the centre to be a single point or shape either inside or outside the object.

Shading & Open Fills

Add depth and dimension to your embroidery with powerful shadows, shades and open fills. Complex shadings and open fills add dimension, color and perspective to embroidered designs. Simple menu selections let you create a range of effects using complex combinations of stitch patterns, spacing, angles and more.

Lap Corner

Change the Lap Corner Overlap and create Flat or Split Overlaps in "Curve Extensions".

Motifs

Create and reuse patterns for runs & fills. Once you've created or digitized a patterned fill you like, e.g. repeated hearts, diamonds, etc, store it away as a Motif and use it whenever you want over and over again.

Schiffli

Create and prepare lacework and emblems precisely and efficiently, with perfect repeat joins and optimized pattern arrangements which minimize digitizing time and disk space. Creates files for standard and multihead machines, and supports the codes for major machine types.

Paghadi Stitch Element (String Stitch)

Attach mirrors or create leaf shaped open fills.

Chenille

Add chenille embroidery capabilities to a lockstitch embroidery digitizing system. Select from stitch types like run stitching or decorative and create intricate designs. Control needle height, corners and stitch length.

Hand Stitch Effect Element

No more "machine-look" embroidery! Create an organic hand-stitch effect with randomized spacing and thickness.
